Karan Kumar Sah
Personal Reflection – Sprint 4

During this sprint, my individual work focused heavily on adapting to sudden changes and applying agile principles more intentionally. One of my main accomplishments was reorganizing my personal tasks after the project direction shifted. I reviewed the updated requirements, rewrote the user stories assigned to me, and adjusted my portion of the backlog so that my work lined up with the new sprint goals. I also clarified acceptance criteria for the tasks I owned, which helped me stay on track despite the sudden pivot.

A major challenge I faced was learning how to shift gears quickly. When priorities changed, I initially found it difficult to redirect my focus because I had already planned my work around the previous approach. To overcome this, I revisited the agile idea of responding to change and reminded myself that flexibility is part of the process. I paused, re-evaluated my task list, and created a short-term plan that matched the revised expectations. This helped me get back into a productive rhythm instead of dwelling on lost progress.

Throughout this sprint, I learned a lot about managing uncertainty and staying organized during rapid adjustments. I became more confident using time-blocking and smaller task breakdowns to maintain progress even when the scope shifted. I also improved my understanding of writing clear and actionable user stories, which makes it easier to pivot without confusion. Another important lesson was recognizing the importance of documenting decisions, so transitions are smoother when changes happen.

For improvement, I think I could benefit from preparing alternative ideas earlier during the planning phase so that unexpected changes do not disrupt my workflow as much. I also want to improve my effort estimation, since this sprint showed me that I sometimes underestimate how long certain tasks will take. In the next sprint, I plan to focus on maintaining steady progress through smaller checkpoints and more frequent personal reviews. Overall, this sprint helped me grow in adaptability and allowed me to develop a stronger, more practical understanding of agile project management.
