SPRINT 5 REFLECTION

During this sprint, I mostly worked on reviewing our user stories and making a list of what still needs to be done on the project. I looked at each of the remaining stories and wrote down the tasks and features that still need to be added. This meant making the rules for difficulty filtering clearer, showing definitions, adding example sentences, building the history feature, implementing favorites, allowing sharing, setting up remote data storage, and finishing the account creation process. By clearly listing these things, I helped the team make a more organized backlog that we can use to plan our next sprint. This also got me ready for the video part of the assignment, where I had to quickly explain what was still on our list of things to do.

The hardest part of this sprint for me was figuring out how all the features worked together in the project. It took time to understand each of our user stories and break them down into smaller, more manageable tasks because they cover a lot of different functions. It seemed like there were a lot of pieces at first, but going over each story helped me see how they all fit together and what each feature is supposed to do for the user. I dealt with this problem by writing down my thoughts, putting similar tasks together, and rewriting some things in simpler language. This helped me understand the backlog better and gave me more confidence in my explanation.

User stories can be very helpful for planning, which is something I learned this sprint. User stories helped me see the project from the user's point of view and understand why each feature is there. Instead of thinking of features as big, complicated tasks, they helped me see the project from the user's point of view. I learned more about how Agile planning works and how refining the backlog helps keep a project on track and moving forward.

I think I can do better in the future if I help with documentation and planning earlier in the sprint. I want to check on the project and start my tasks earlier so that I have more time to review and improve my work. We could also benefit from checking in with each other more often as a team to make sure everyone is on the same page about the current priorities and knows which backlog items are most important for the next sprint.
